Composite Base Rig Mats

Access Matting That Solves Problems

PROUDLY PRESENTS THE WORLD'S STRONGEST, ALL NEW AND IMPROVED

PRO ROAD

Composite Base Rig Mats is proud to introduce the all new **Pro Road**. The new profile is the lightest and strongest Rig Mat in the world, with the ability to take loads of 580 tons/m² or 825 psi at the mere weight of 10kg/m².

The new **Pro Road** is the world's first Rig Mat system that is rapidly deployable and recoverable with multiple load bearing inserts, making it perfect for expeditionary mining and military applications.

The mining of minerals, ores and gases often requires the transportation of large vehicles and equipment over challenging terrain in remote locations. The new **Pro Road** system allows for rapid site establishment with minimal civil earthworks, saving both time and money. The all new **Pro Road** system also prevents rutting, soil-compaction and soil contamination while creating a safe, stable surface for workers and equipment. With this in mind site rehabilitation is completed in days – making **Pro Road** the perfect choice for the environmentally conscious.

Technical specifications

| | |
|---------------------------------|---|
| Panel Sizes: | 1m wide x 1-5m long |
| Panel weight / m ² : | No insert 10kg 50% insert 30kg 100% insert 50kg |
| Panel overlapping flange: | Yes |
| Panel locking system: | Zip Lock |
| Panel traction / grip: | Yes , various options |
